**FiberRunner® 6x4 Routing System**

**Specifications**

The 6x4 routing system shall be a system of channel, fittings, and brackets designed to segregate, route, and protect fiber optic and high performance copper cable. Channel and fittings shall be assembled using pre-assembled couplers. A selection of spillout options shall be available that easily attach using the vertical tee. Fittings maintain a minimum 2" bend radius to protect against signal loss due to excessive cable bends. Available system colors shall be yellow, orange, and black. A full complement of brackets shall be available for attaching system components to ladder rack, threaded rod, auxiliary framing, strut, equipment racks, cabinets, and raised floor pedestals.

**Technical Information**

Dimensions are in inches (Dimensions in parentheses are metric).

**Open channel**

**Material:**

Rigid PVC (Channel), ABS (Fittings)

**Flammability:**

94V-0

**Approvals:**

UL Listed to 2024A Optical Fiber Cable Routing Assemblies
Compliant with the applicable tests in Telcordia GR-63-CORE
Network Equipment Building Systems Level 3

** CSI spec form:**

LP-CISISPEC-FR

**Key Features and Benefits**

- **Fastest installations:** No bolts need to be tightened and no tools are required when installing the QuikLock™ Coupler; QuikLock™ Couplers and Brackets take less than five seconds to make a mechanically secure connection.

- **Easy to maintain:** Hinged channel cover installs easily and fully encloses the channel for cable protection; split hinged channel cover creates a radius of 3/4" (18mm) opening for easy access to add or remove cables; the 6x4 hinged split hinged channel covers will stay open between 30° and 90° to allow cable access even in height restricted areas.

- **System strength:** Robust system of channel, covers, fittings and other non-metallic system components, protect cable from physical damage; system includes full range of directional and spillout fittings.

- **Versatility:** Multiple spillout options include spill-over fittings and the vertical tee which accepts a three sided trumpet, transition to corrugated tubing and Panduit® FiberRunner® and Fiber-Duct® Systems.

**Cable protection:** Minimum 2" bend radius maintained throughout all fittings prevents excessive bends in fiber optic cabling.

**Applications**

The FiberRunner® 6x4 Routing System is a system of channel, fittings and brackets designed to segregate, route, and protect fiber optic and high performance copper cable. It is suited for data center applications where cable is routed from distribution areas to equipment cabinets or racks. It is used in Telco Central Offices to route fiber optic jumper cables between fiber distribution frames and equipment bays. It can be deployed over the racks or in approved underfloor applications. Channel and fittings are assembled using timesaving Panduit® QuikLock™ Couplers. A selection of spillout options is available that easily attach using the vertical tee. Fittings maintain a 2" bend radius to protect against signal loss due to excessive cable bends. Available system colors are yellow, orange, and black to differentiate various types of cabling. A full complement of QuikLock™ Brackets is available to attach system components to support structures found in all applications.

The FiberRunner® 6x4 Routing System is part of the Panduit complete fiber distribution system, which includes the FiberRunner® 24X4, 12X4, 4x4, and 2x2 Routing Systems, the Fiber-Duct® 4x4 and 2x2 Routing Systems, Wyg-Grid™ Overhead Cable Tray System, cable management, and racks.
