

Open the Door to Data Center Cooling

Panduit and Motivair have joined forces to offer a premier liquid cooling portfolio combining Motivair's rear door heat exchanger (RDHX) and the Panduit FlexFusion™ cabinet.

These integrated solutions work Day 1 based on Panduit interoperability and validation testing.

Why the Panduit FlexFusion?

- Best-in-class static load rating of 3,500 pounds and 1,000 pounds for rolling load
- 80 percent open perforated doors assure maximum airflow throughout the cabinet for high thermal application
- Cabinets and accessories are integrally bonded without the use of grounding wires to provide a safe and reliable network while reducing installation costs
- Cabinets are powder coated in a durable, low maintenance polyester epoxy paint available in Black (RAL9005) or White (RAL9003)

Why the Motivair RDHX?

- Provides 100 percent heat removal in air-cooled or liquid-cooled data centers, ensuring optimal performance even under the most demanding conditions up to 75Kw
- Global fulfillment and engineered to ensure maximum uptime and operational stability
- Scales as your operations grow, efficiently meeting future demands
- Reduces energy consumption and operational costs

Comprehensive Data Center Solutions

Panduit is a leading global manufacturer of high-quality electrical and network infrastructure and connectivity solutions. We also offer these innovative products for your Data Center

- Intelligent PDUs that provide more efficient power management
- UPS devices that ensure increased network reliability
- Fiber and Copper Connectivity to enable high bandwidth performance
