

5 Signs it's Time to Upgrade your PDU

Today's power needs are different and your old PDU might be holding you back. If these issues sound familiar, it's time to upgrade to something built for the way your infrastructure performs now.

1 | YOU'RE MAXED OUT ON DAISY CHAINING

Most pdus in this range top out at 4. ES2P supports up to 16 for simpler, cleaner rack designs.

2 | YOU'RE STILL STUCK ON 10/100 MBPS

Legacy PDUs can't keep up with network demands. ES2P comes with gigabit Ethernet built in.

3 | YOU'RE MANUALLY UPDATING FIRMWARE ONE PDU AT A TIME

That's a time drain. ES2P supports one-click, daisy-chained updates.

4 | YOU CAN'T SEE WHAT'S HAPPENING AT THE RACK

That's a blind spot. ES2P connects to Panduit environmental sensors and access control handles for real-time visibility.

5 | YOU'RE PLAYING GUESSING GAMES WITH POWER DATA

Inaccurate metering creates risk. ES2P delivers +/- 2% metering accuracy at inlet and outlet.

**Don't let outdated
PDUs slow you down.**

ES2P is built to power your next move with modern features at a price that makes sense.
