IndustrialNet™ 8-Port DIN Rail Mount Fiber Patching Solution

**specifications**

8-port DIN rail mount fiber patching solution shall be made of high impact polycarbonate material and shall mount to a standard 35mm DIN rail. Product shall have a removable faceplate that includes four label pockets, labels and covers for port identification. The product shall include adjustable latches to lock it in place when mounted on the DIN rail. Latch design shall also allow product to mount on a flat surface for vertical bulkhead mounting. Fiber solution shall provide enclosed fiber protection for terminated distribution style cabling and include a PG21 or 3/4 NPT cable cord grip to secure fiber cable(s) exiting the enclosure. 8-port DIN rail mounting patching solution shall accept any Mini-Com® Module that occupies a single space.

**technical information**

- **Standards:** Norme International Standard CEI IEC 60715; DIN EN 60715; DIN EN 50022; DIN 46277-3; BS 5584:1978; IEC 60068 Environmental Testing; cULus
- **Material:** UL94V-0 engineering thermoplastic
- **RoHS compliance:** Compliant
- **Mounting options:** Mounts to a standard 35mm DIN rail; can also mount to other surfaces using mounting holes in latches
- **Packaging:** Fiber enclosure includes PG21 cable entry gland which includes two inserts for use with a range of fiber cables and 6-32 x 3/8” Phillips head screws to mount faceplate to patch panel and 4 labels and label covers
- **Temperature:** Temperature range of -10°C to 60°C (14°F – 140°F) complies to UL 508

**key features and benefits**

- **DIN rail mount**
  Employ dual purpose, snap-in mounting latches which have an audible click to indicate the latch is in the correct position. The latches serve to hold the unit on the DIN rail while allowing it to slide side to side. Latches also serve as wall mounting brackets via an external mounting hole in the latch
- **Modular**
  Accepts up to eight single Mini-Com® Fiber Modules, and fiber connectors
- **Patching**
  Easy and logical port mapping to common Ethernet mini-switch ports enables convenient MACs (Moves, Adds and Changes) in industrial telecommunications zone enclosure or control panel applications. IndustrialNet™ 8-port DIN Rail Mount Patching Solution provides a testable permanent link for link commissioning and troubleshooting and provides flexibility and scalability for future growth
- **Identification**
  DIN rail mount patching solutions include label pockets, labels, and transparent label covers for clear identification; complies with ANSI/EIA/TIA-606-A labeling requirements

**applications**

IndustrialNet™ 8-port DIN Rail Mount Fiber Patching Solution conserve precious real estate by consolidating all fiber patching onto the DIN rails of a zone enclosure or control panel and are designed to “port map” to Industrial Ethernet modular switches. This product can be deployed as flexible, reconfigurable and high performance structured cabling elements in traditional hierarchical star, fiber to the enclosure (zone) or device level ring Industrial Ethernet architectures. This structured cabling solution is important as Ethernet reaches further into the industrial automation network, enabling traditional IT departments to manage change in the industrial network through the use of familiar patching facilities and structured cabling models. The use of Panduit IndustrialNet™ Modular Patching allows customers to easily deploy fiber connectivity in the same modular DIN footprint in such applications.
**typical configurations for 8-port DIN rail fiber enclosure**
