

**INSTRUCTIONS  
FOR REPLACING  
THE ELASTIC IN  
TYPE RER  
ELASTIC  
RETAINERS**

**NOTE:**

The following replacement sequence shows the base removed from the harness board; however, the elastic can also be replaced without removing the base from the board.

**4** Loop free end of elastic around wire form.

**5** Slip wire form around button on the white retainer arms.

- 1**
- With one hand hold black base between your middle and index fingers, while using your thumb to push white retainer arms.
  - With your other hand, pull white retainer arms in opposite direction that your thumb is pushing; white piece will then snap out.

**2** Unhook worn elastic or wire form from button at bottom of white retainer arms and discard.

**3** Thread new elastic through white retainer arms and wrap around bottom edge.

**6** The bottom on the white retainer arms should be inserted into the black base and snapped into place.
