

SmartZone™ Cloud

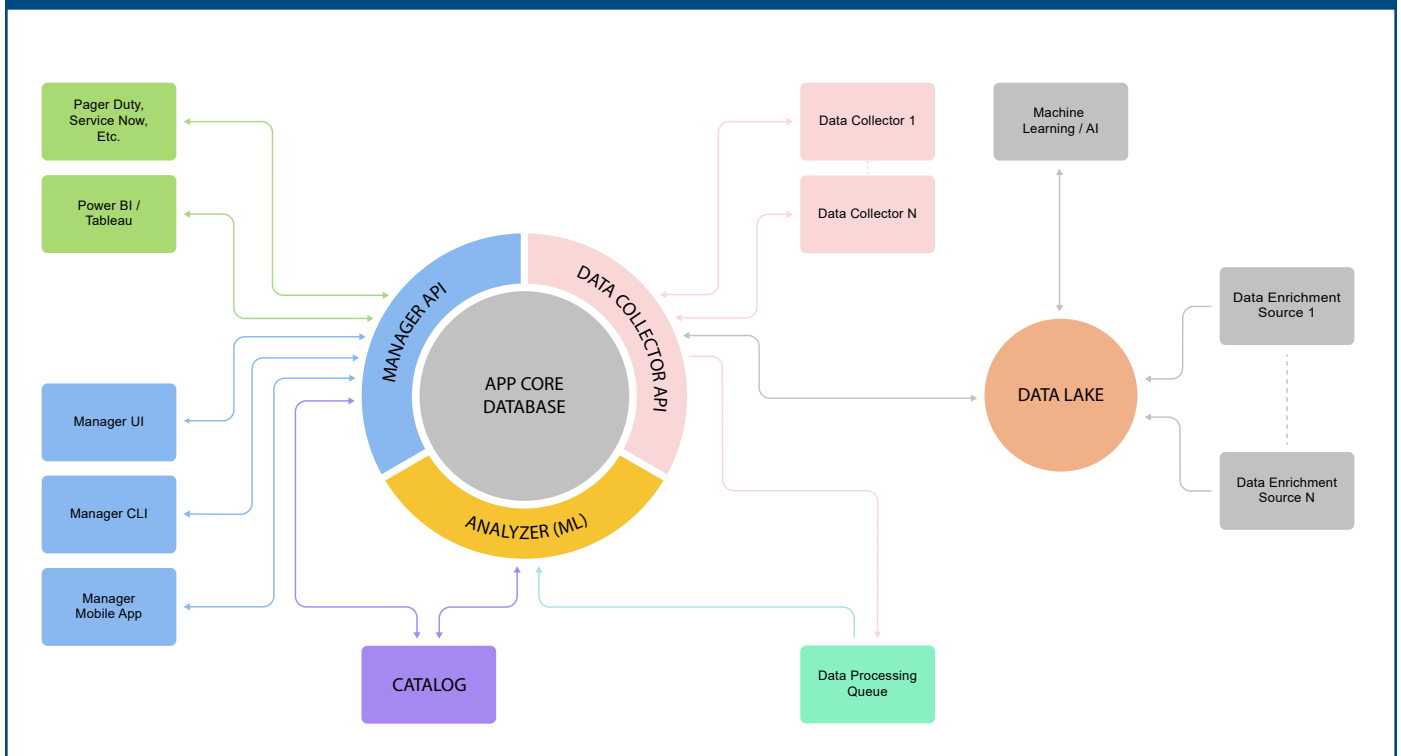

Architecture Guide

SmartZone™ Cloud is the Next Generation DCIM software to address digital infrastructure needs of a hybrid IT environment.

The architecture future-proofs an enterprise in its pursuit of a cloud-first DCIM strategy delivering greater cost predictability and control, faster deployment, instantaneous software updates/patches, on-demand scale, enterprise-grade security, and geographical redundancy/DR.

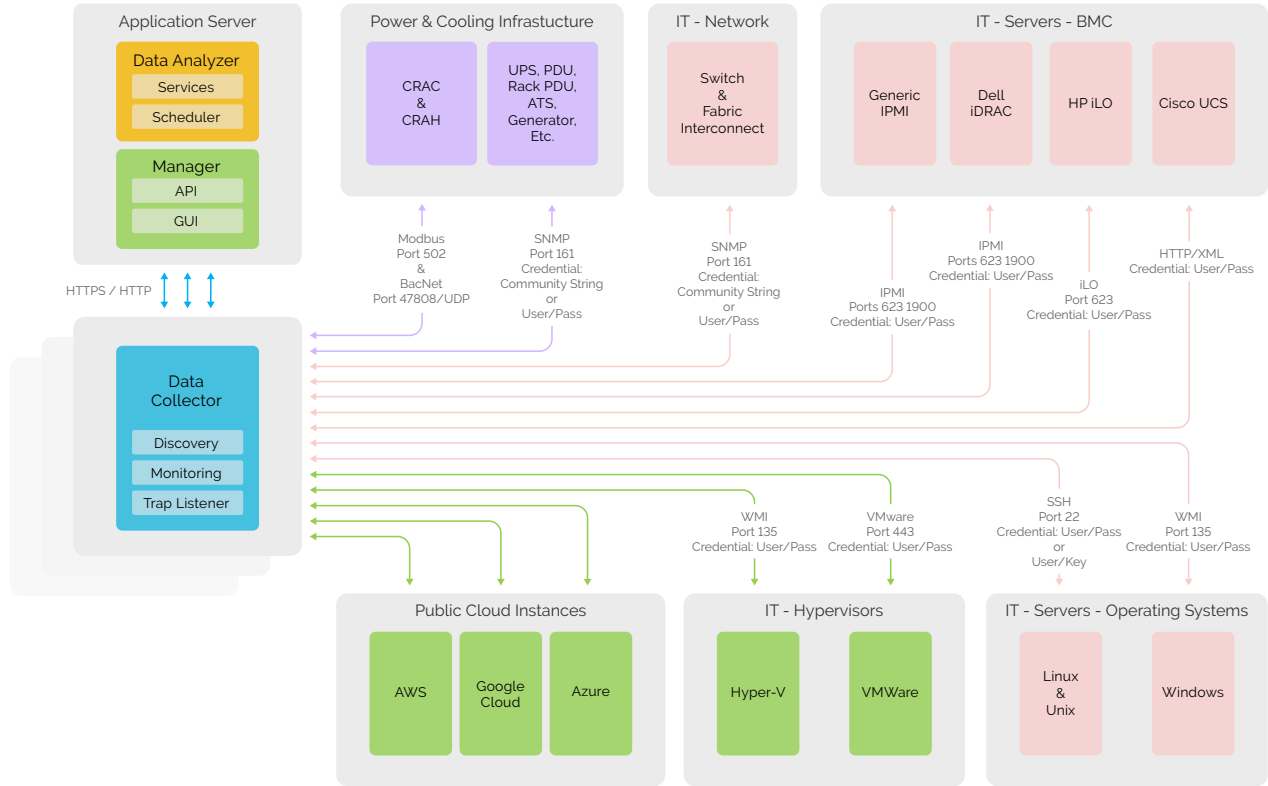

SmartZone™ Cloud leverages cloud-native software and core technologies developed and proven as part of industry standards. Autodiscovery reduces human error and uses multiple machine protocols and a DSL to identify, model, and monitor a broad range of data center devices.
