

SmartZone™ Cloud

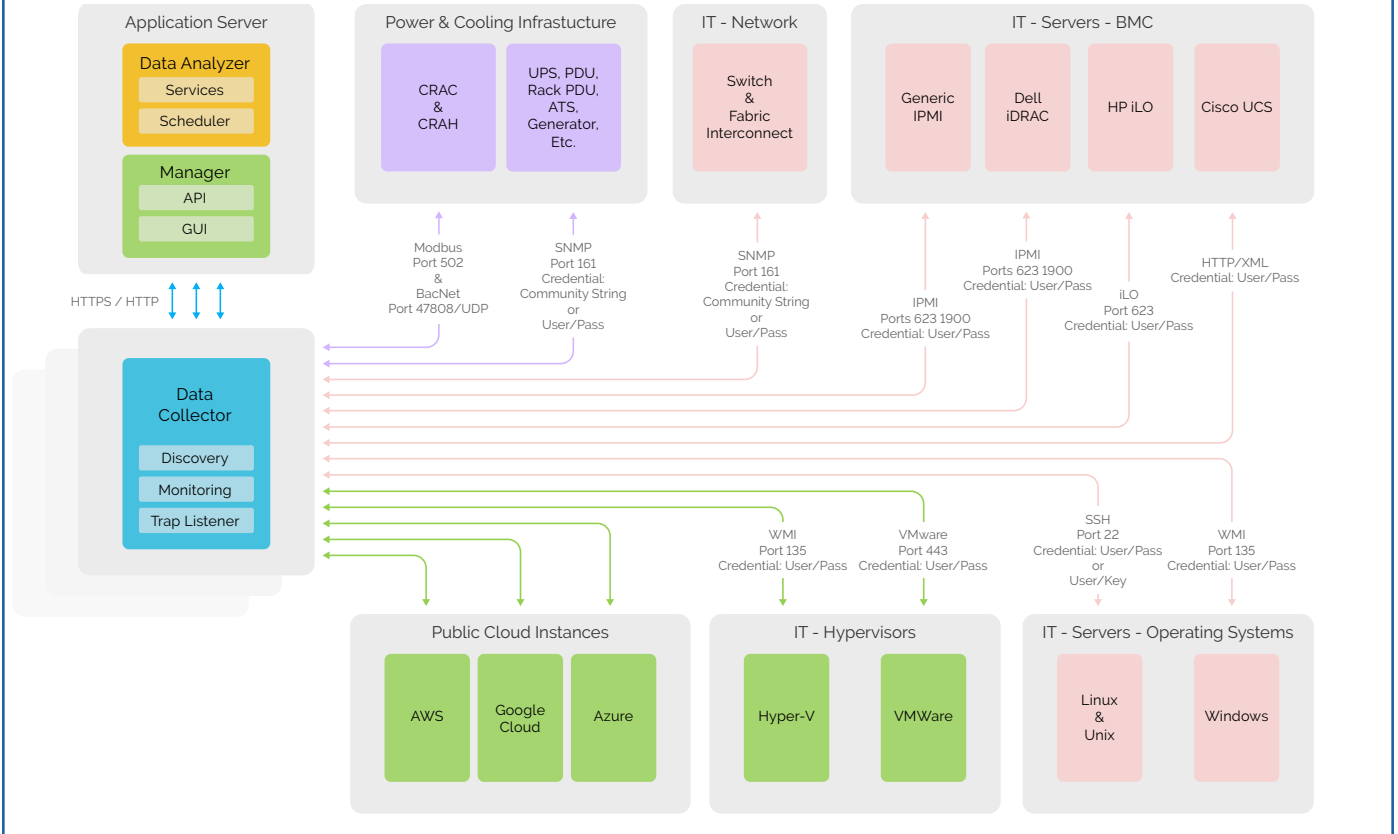

Architecture Guide

SmartZone Cloud architecture future-proofs an enterprise in its pursuit of a cloud-first DCIM strategy delivering greater cost predictability and control, faster deployment, instantaneous software updates/patches, on-demand scale, enterprise-grade security, and geographical redundancy/DR.

SmartZone Cloud additionally leverages core technologies developed and proven as part of industry standards. Autodiscovery uses multiple machine protocols and a DSL to identify/model a broad range of data center devices.

Autodiscovery Architecture Supports Standard Protocols

Software Architecture Supports Multisite Environments
