

Advanced MaTriX Category 6A Cable

The Panduit® TX6A™ 10Gig™ Advanced MaTriX Category 6A cabling system is the most advanced copper cabling system on the market today. Advanced MaTriX cables feature an innovative tape that further reduces cable diameter to 0.275", while providing a full 100-meter solution with best-in-class performance.

Features and Benefits

0.275" cable diameter on plenum with 100-meter channel reach

Industry-leading headroom warranty

Superior PSANEXT and PSAACRF suppression significantly reduces alien crosstalk for improved 10GBASE-T performance

Size and design provide efficient cable management and improved installation flexibility

Small Cable Diameters with Big Performance

The smaller cable diameter provides you with the ability to run more cables in the same amount of space as before. Plus, the small size means cables are more flexible and easier to install. These improvements come with the same industry-leading headroom warranty you've come to expect from Panduit copper cables. You can install these cables with confidence that they will have margin over Category 6A standards and support all applications for Category 6A such as 10GBASE-T and Power over Ethernet at channel lengths up to 100 meters.

Contact a Panduit Sales Representative for more information on the NEW advanced MaTriX offering and to assist with a specification for your project.

Panduit will be accepting orders and begin shipping in October 2014.
